EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Donald Drummond on 9/27/2004.

The application has been amended as follows:

Claims 7 and 8 are cancelled.

Allowable Subject Matter

Claims 1-6 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claim 1, the references of the Prior Art of record fails to teach or suggest the combination of the limitations as set forth in claim 1, and specifically comprising the limitation of a glass funnel for a cathode ray tube, which has a substantially rectangular opened end at one end and a neck portion at the other end and which constitutes, together with a glass panel having a substantially rectangular face portion, a glass bulb to be used for a cathode ray tube, where the glass constituting the glass funnel contains, by molar percentage, at least 60% SiO₂ and at least 7% of PbO; when the molar percentages of Na₂O and K₂O contained in the glass are represented by WNa and WK, respectively, $0.35 \leq WK/(WNa+WK) \leq 0.6$; a compressive stress layer is formed by chemical tempering at least in the outer surface of a region containing a position

Art Unit: 2879

where the tensile stress formed when the interior of the glass bulb is vacuumed to produce the cathode ray tube, becomes maximum; and either one or both of the outer surface of the chemically tempered region and the inner surface opposite to said outer surface, are colored by ion exchange coloration. The closest art of reference is Plumat et al. (US 4,102,665) which discloses the use of ion-exchange for chemical tempering and for coloration of sheet glass. However there does not appear to exist any motivation for using this technique of coloration in Funnel glass of CRTs.

Regarding claims 2-6, claims 2-6 are allowable for the reasons given in claim 1 because of their dependency status from claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Morimoto et al. (US 4,397,667) discloses the use of silver ions to color sheet glass.

Hachitani (US 6,607,999) discloses the use of chemical tempering to strengthen CRT funnel glass.
